

SmartLink

The telematic system that
optimises efficiency

#GetSmart

Introducing Johnston SmartLink™

Your system for real-time fleet efficiency

With Johnston SmartLink your sweeper fleet can be out working harder for longer – AND you can save money making your fleet more efficient.

All compact, mid-sized and truck mounted Johnston sweepers sold in the UK are now fitted with the Johnston SmartLink vehicle tracking and management system, giving us the connectivity tools to carry out service calls and repairs even faster, whilst also supplying a vast range of operational and performance data for our customers through a selection of subscription-based packages.

Each machine broadcasts a range of tracking, performance, service and diagnostic smart-data which can be viewed through an account-based portal, allowing you to track the location of sweepers via Google Maps, as well as reviewing KPIs such as fuel consumption, engine rpm, hours worked, and more.

Johnston SmartLink also picks up driver operational habits, alerting fleet managers to key warnings such as speeding and sweeping without water, to allow correct operation to be encouraged and measured.

It also means that you can see instantly when machines require service, and gives you the ability to store information and produce reports for customers as evidence of work completed - and even for third party insurance claims.

To get your sweepers back out working faster than ever, Johnston SmartLink helps us to locate machines and send out the closest Service Technician to you to save time, and also allows us to diagnose faults remotely to make sure we have the right parts on-board, increasing first-time fix rates. Issues can even be resolved over the phone, and routine servicing can be monitored remotely and scheduled well in time.

Johnston SmartLink is an invaluable tool to make real cost savings by encouraging good driving habits, optimising on-station work time, enabling faster call-outs, and speeding up repairs when needed - all helping to run fleets efficiently and get sweepers back out on the road, working, faster than ever.

Track data:

See your fleet's activity in real time - invaluable for locating sweepers that need attention.

Performance data:

Monitor your vehicle's activity, how it's performing and spot potential issues before they happen.

Efficient Action:

Speed up call-outs by sending the nearest service vehicle with the right parts on board.

Unlock your fleet's potential with a SmartLink subscription:

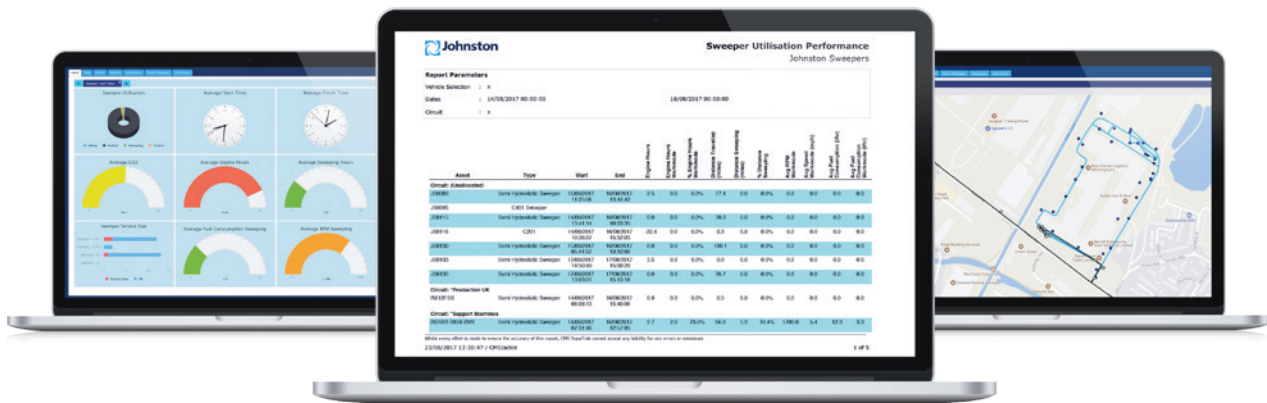

Track Pack

- Know where your assets are
- Know where they have been
- Up to the moment snail trail mapping and street view functionality
- Key maintenance alerts
- Compliance alerts
- Reports

Performance Pack

- All the features of 'Track Pack'
- Dashboard showing vital information for all sweepers
- A sweeping versus transit snail trail mapping function
- Reports with 'date ranged' and 'vehicle lifetime' utilisation
- Fuel consumption
- Carbon footprints
- Ability to plan service interventions
